

two

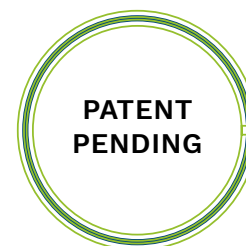

BY **LAMINAM**

The world's thinnest
revolutionary surfaces
love creation, lightness,
respect and absolute
beauty, in harmony with
the universe.

Yes, the Universe.

But what is twO?

Only two millimetres of thickness.

A revolution, a stargate, a big bang.

The ultra-thin line that separates the world as it is from the wonderful place it will be.

That certain je ne sais quoi, an undefinable almost-nothingness that transforms things, ideas, sensations, emotions. The flash of insight and infinite attention.

The unbearable lightness of being that becomes sustainable. For nature, for the planet, for living. That bends, extends and expresses itself in forms of rare beauty and multiform visions. One for every look, one for every touch.

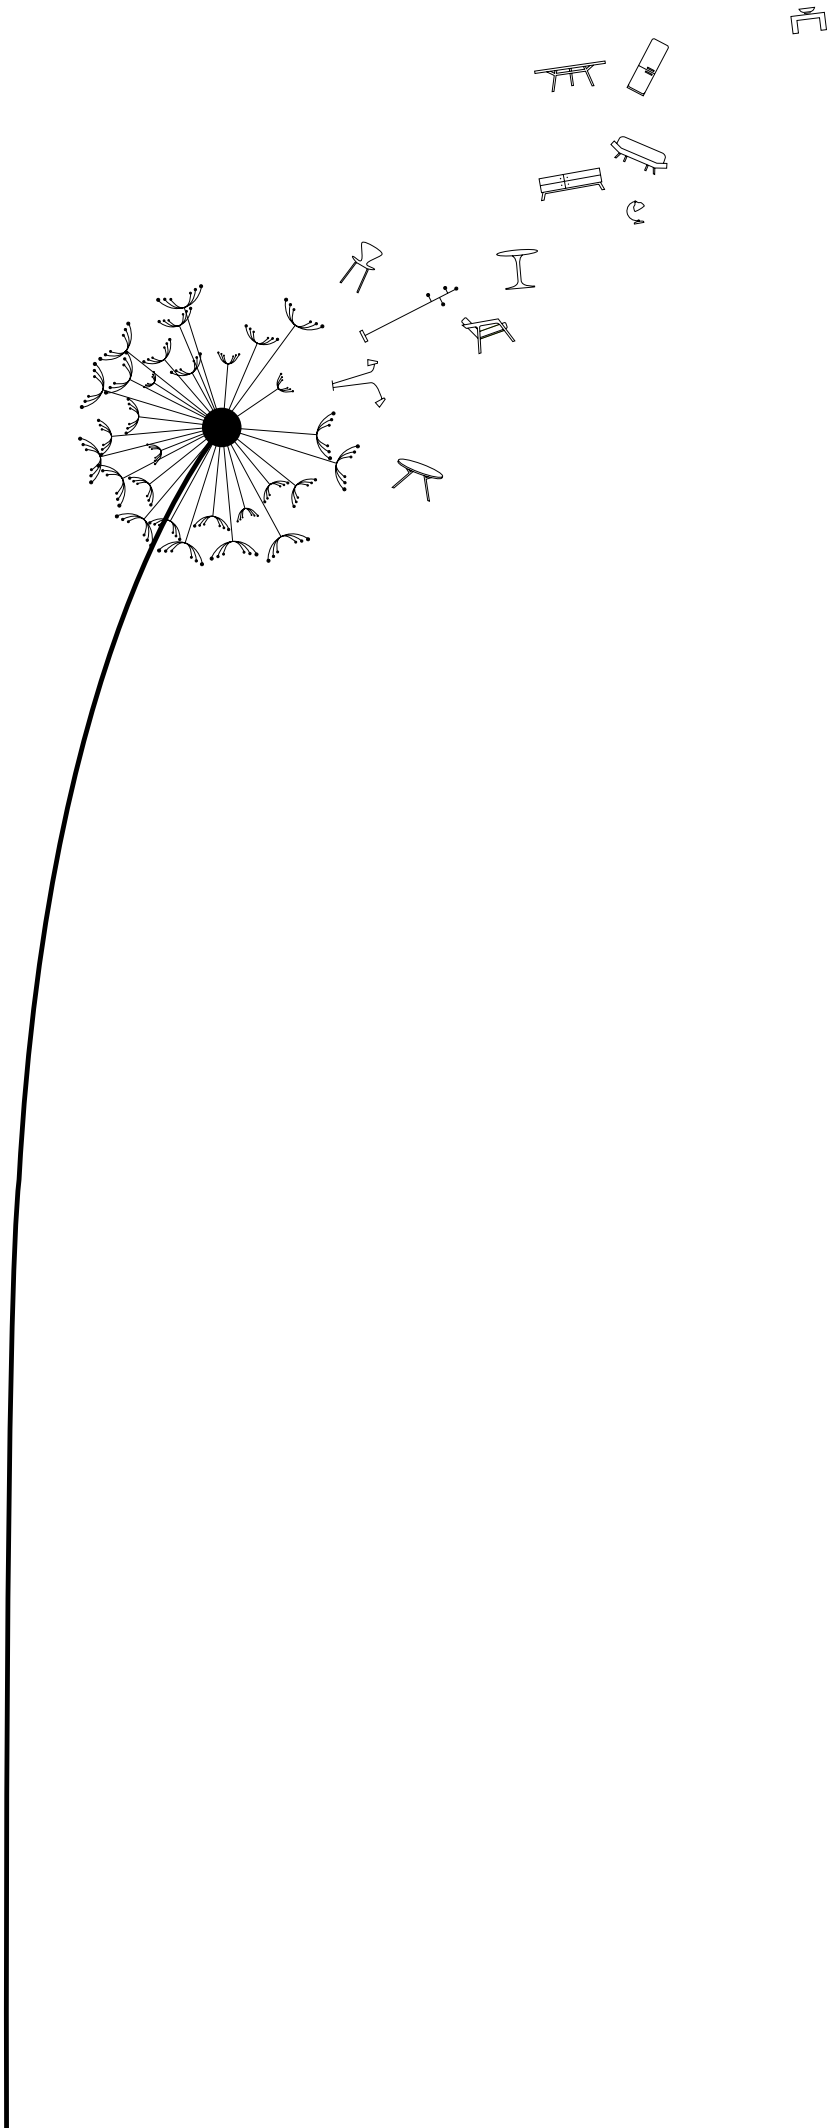

Ultimately, what is twO?

The world's thinnest revolutionary surface.

Absolutely, uniquely Laminam.

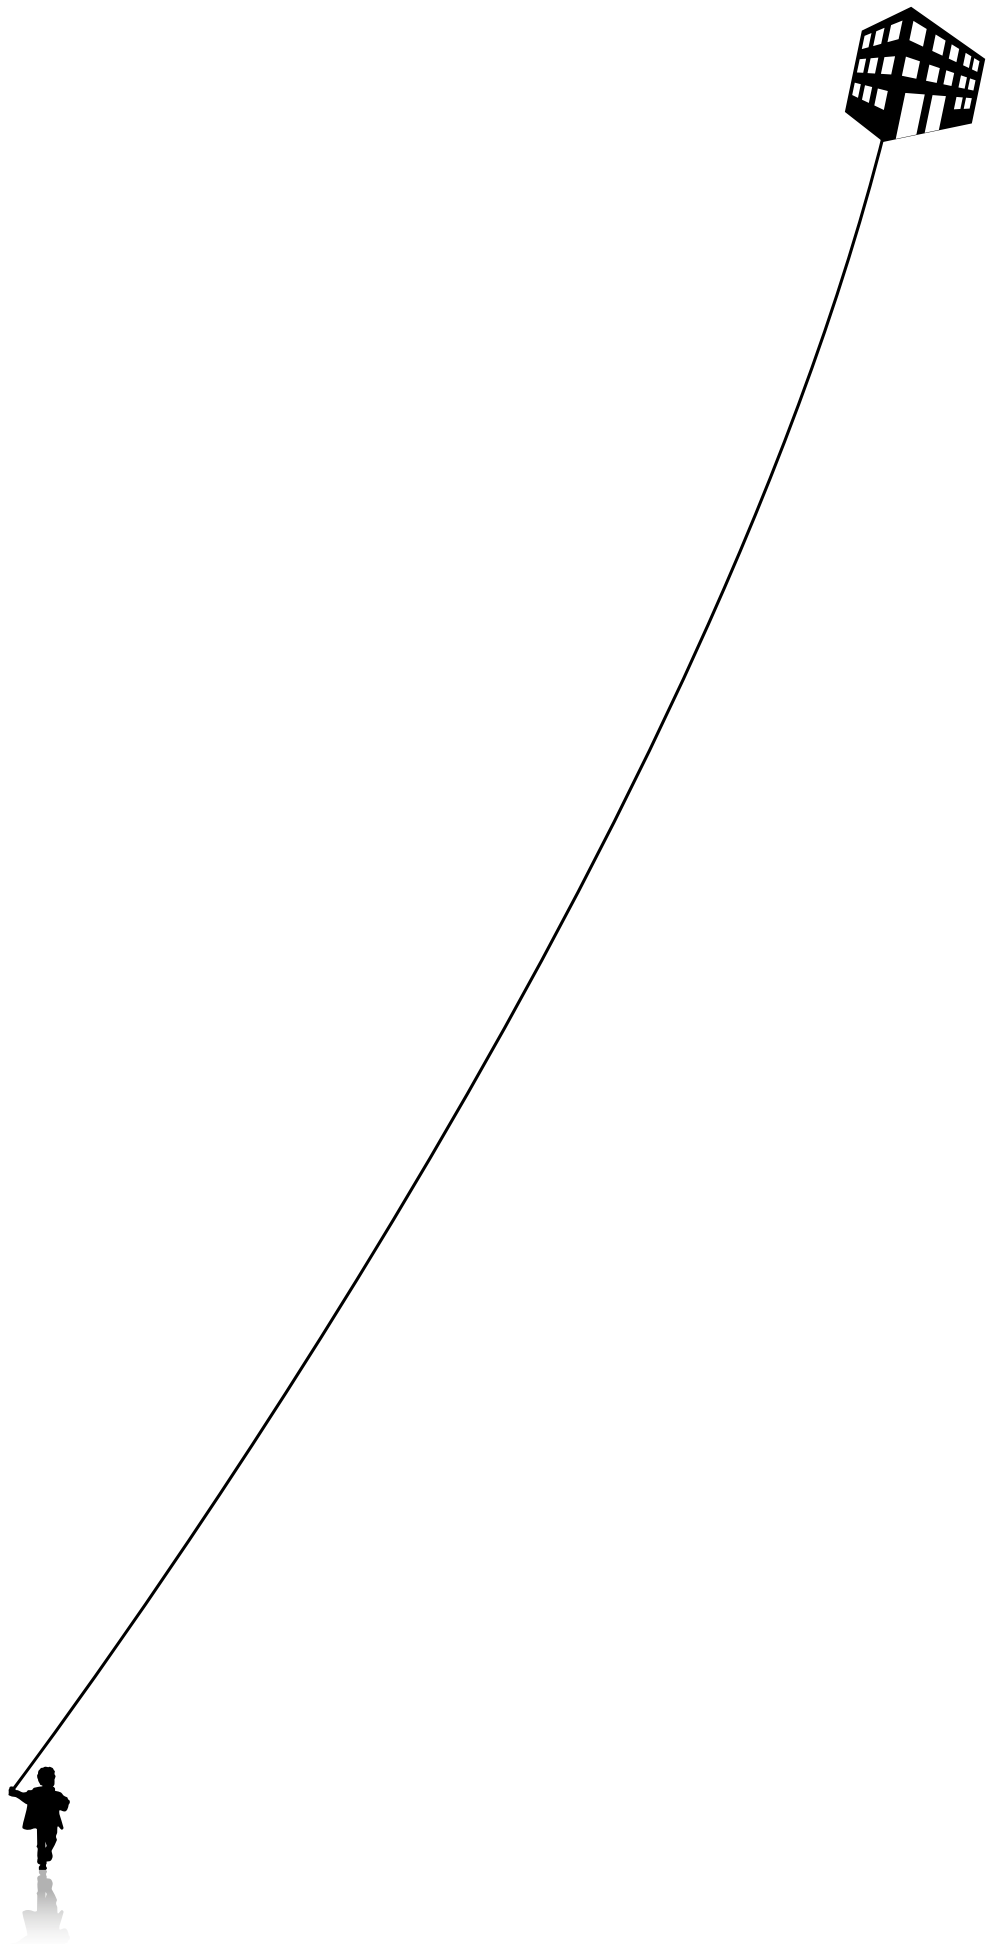

It isn't just design, it's the art of living.

The world's thinnest revolutionary surfaces redefine the very essence of design. Only two millimetres thick, they create infinitely versatile, multifaceted, original and inspired forms of residential living. Like artworks to experience.

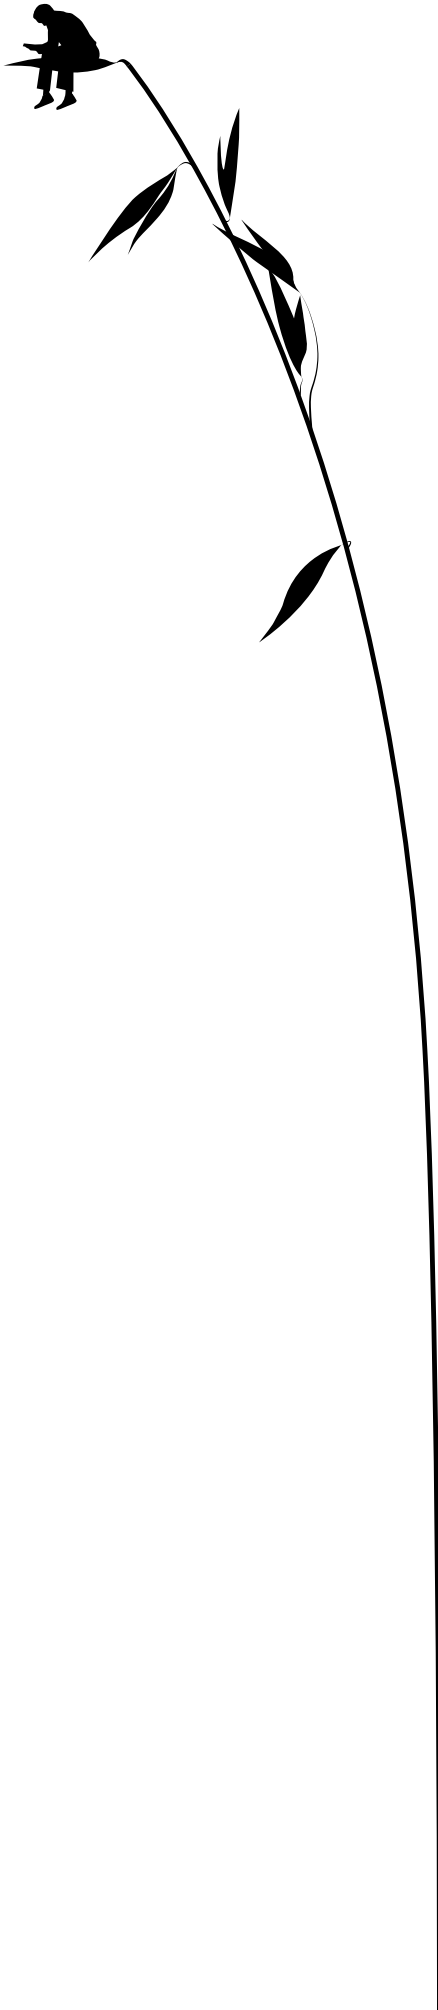

It isn't just cutting-edge technology, it's a quantum leap.

Looking ahead takes us far away. Great insights push us beyond the imaginable, making the absolute innovation of **twO** possible today. Excellent technical and aesthetic performance in the thinnest product yet: 2 millimetres. That's all.

It isn't just beauty, it's poetry for the planet.

What's the point of two millimetres of thickness if not to take care of the world? What are two millimetres in the enormity of our lives? Less impact on the planet and a new harmony between us and nature.

SUS-TAIN-A-BLE AT THE CORE.

What does just two millimetres of thickness mean?

A new and authentic sense of sustainability.

The world's thinnest surfaces are fired in electric kilns powered by our photovoltaic plant, an absolute innovation that contributes to reducing impact on the environment along the entire supply chain through to the end customer. The revolutionary **twO** surfaces are created with recycled and totally recyclable materials.

A conscious and kind choice for the world's inhabitants.

The technology of lightness and beauty

Forget cold, hard technology.

With **twO by Laminam**, technology communicates in sublime and creative ways. The world's thinnest surfaces are also the lightest, as well as delivering excellent technical performance and the ultimate in beauty. But there's more.

A sense of ease and versatility that runs from flexibility to simplicity of cutting, worksite use and, not least, transport.

Yes, it really is the lightness we were waiting for.

GEMINI
Collection

Reflected Synergies

The profound dialog between humans and nature translates into an interplay of glimpses and reflections, where humans and the earth, twin faces, reflect each other and collaborate in perfect synergy.

In the constant interchange with the surrounding environment, nature shows us that we are part of an intricate and wonderful living system. A harmonious meeting, expressed through grandiose and cyclic movements, which give form to the structure itself of the Gemini collection, inspired by the natural flows between earth and sky.

With the Gemini collection, Laminam is re-establishing the collaborative and primordial dialogue between humans and nature, transferring it onto a technically cutting-edge aesthetic plane, with a focus on the lifecycle of the natural surface, from its creation through to its final application.

LUCE

In the impalpable and silent dance with which the day begins, the Gemini collection glows with Luce, a shade which pays homage to the primordial source of life, interpreted in a delicate, snowy pastel tone which irradiates serenity in the installation environment.

GRANO

Grano celebrates the vital link between humans and nature through food, evoking golden fields of grain swaying in the life-giving sun, and pays homage to the earth, source of resources and nourishment. A warm color with beige-hazelnut flecks, Grano is the ideal choice for those looking for a safe yet high-impact chromatic solution which is able to transform the space into a welcoming environment, opening the doors to infinite potential combinations and additions.

PELLE

Tales of memories woven between the walls, a shade which takes us back to our origins. Pelle is the shade from the Gemini collection which celebrates the intimate bond between people and the earth, a callback to our most profound essence, translated into an antique pink tint with earthy flecks. Inspired by traditional wall coverings, Pelle transfers an incredible aesthetic result into the revolutionary thickness of just 2 millimeters, one which is intense and at the same time pleasing to the touch.

ACERO

Acero is the brightest, most sophisticated, yet at the same time most delicate shade of the Gemini collection, which captures a palette of intense and captivating colors on its surface. Each leaf becomes a little soft red work of art, marking the passage of time through the seasons, nature's eternal dance.

CIELO

Embedding a glimpse of the continually shifting sky in living spaces, interpreting the changing shades of the light, the clouds and the wind. The Cielo shade from the Gemini collection is blue-gray in tone and communicates balance and calm, an all-enveloping design freedom and expression of the celestial vault in its infinite chromatic explorations.

CENERE

Renewal, transformation, new harmony between people and nature. Cenere is rebirth, rising from the ashes, with the strength of fire – a cleansing element which brings with it the bequest of a new compositional scenario, made possible through unique choices of great visual impact. Cenere addresses the design of surfaces and the world of furnishings for dynamic, lived-in environments, where beauty melds with the practicality of a dark yet warm shade, easily combined with other colors of the Gemini collection in any application context.

MUSCHIO

A full, intense and all-enveloping color; breathe in fully in front of a virgin forest, then breathe out: your space is an extension of nature. The Muschio color responds to design choices which speak of a profound desire to reconnect with the natural environment, the need to be rooted in the simple yet extraordinary wonders which only nature can offer. Its adaptability to different solutions, from living spaces to commercial environments, is enhanced by a chromatic effect designed to both welcome and astound.

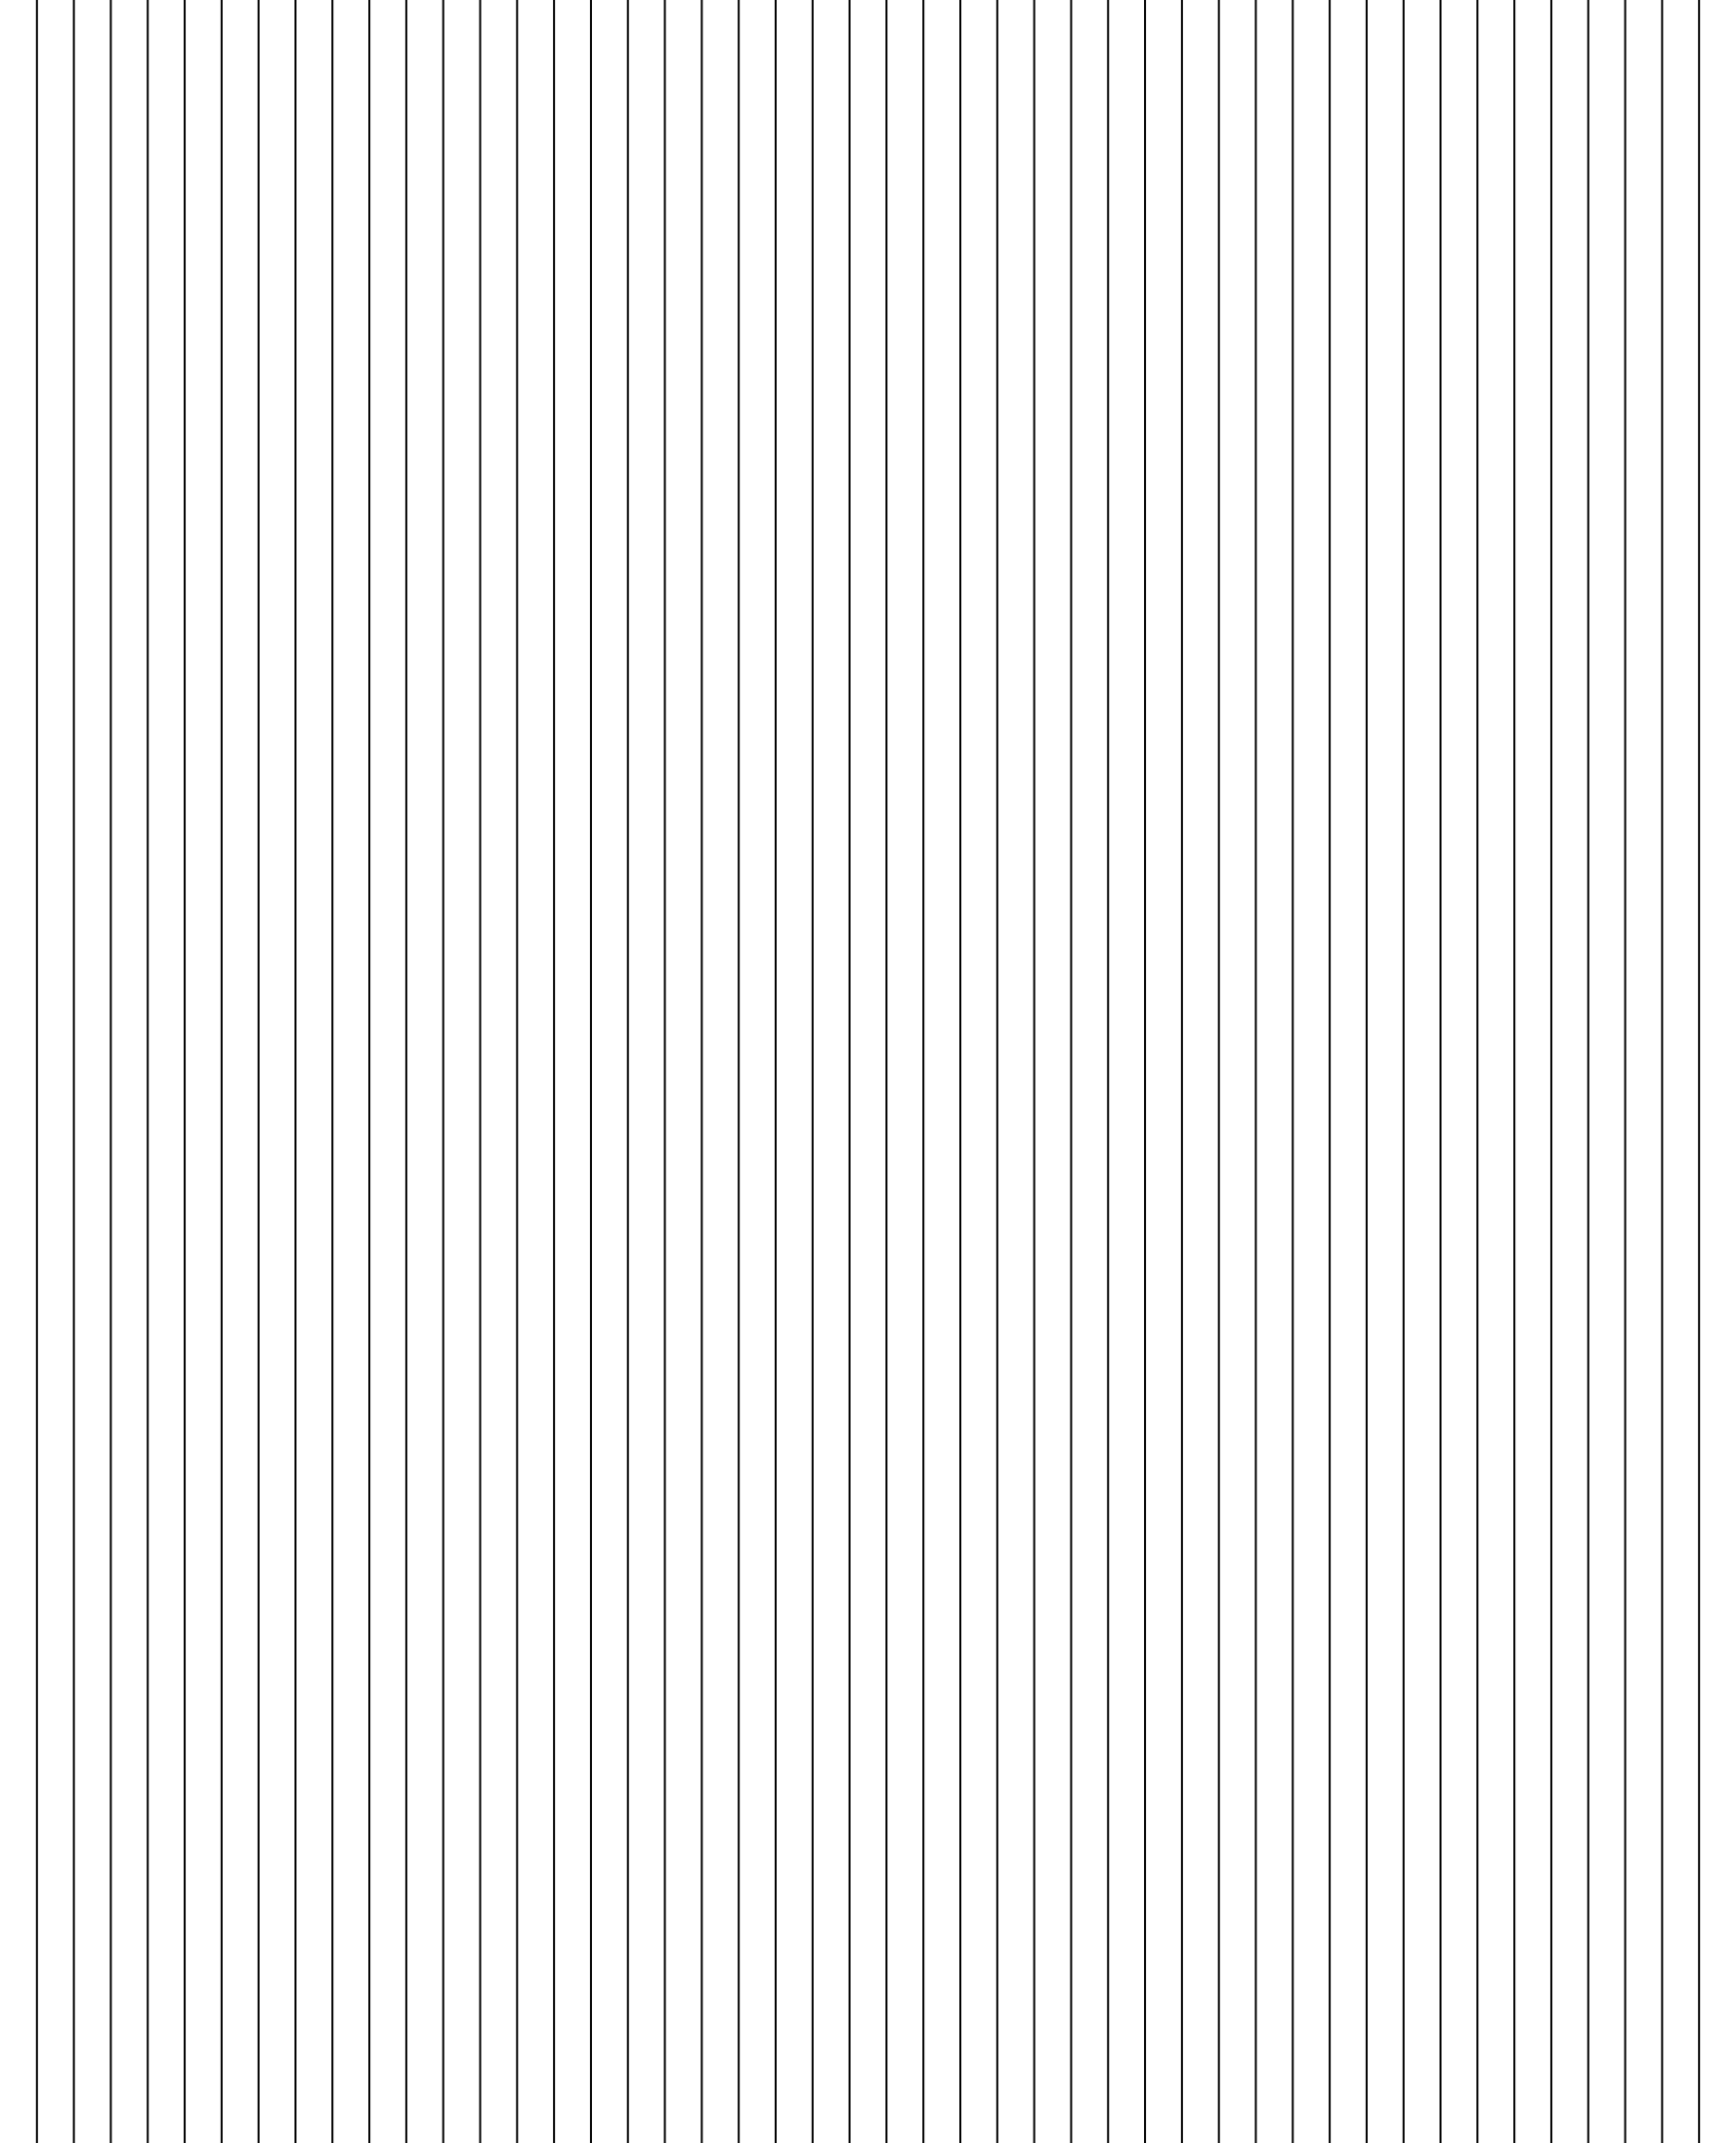

FLORA LUCE

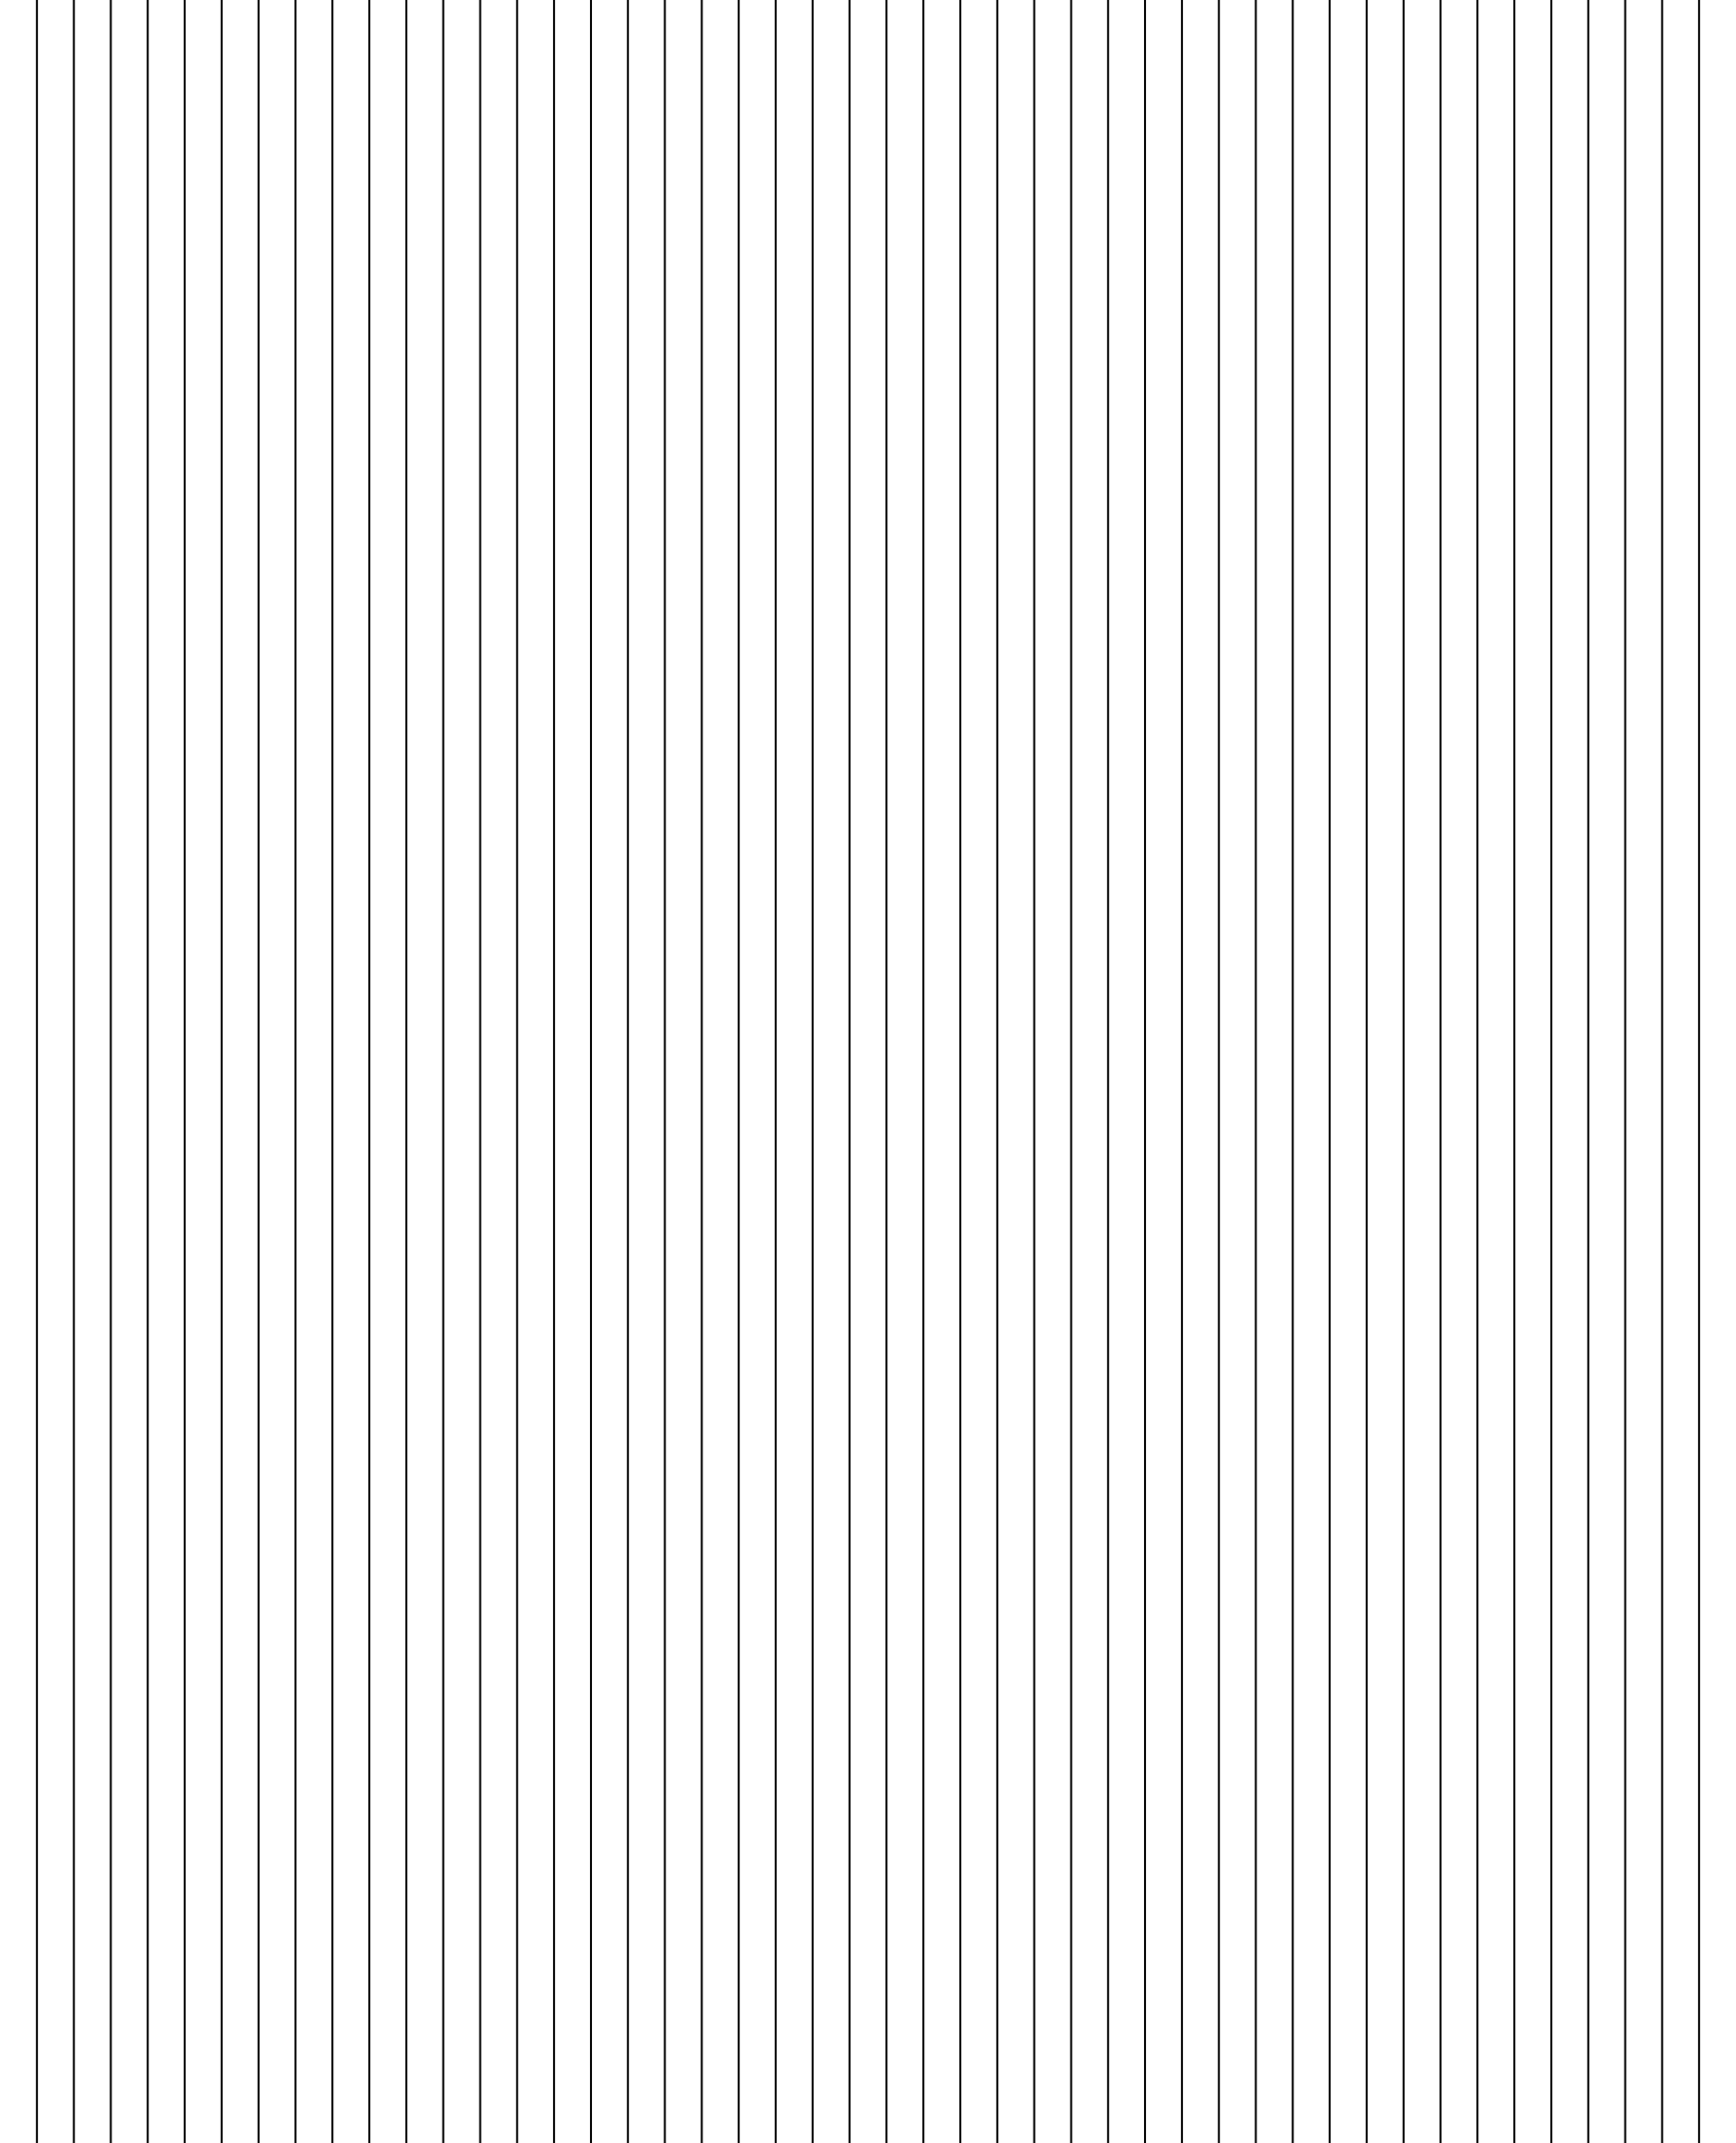

Flora is more than decoration. It is an emotional experience which enhances design surfaces with an homage to nature and to the wonderful interplays of light and shadow created by plant life. Composed of two modular designs, Flora is the visual interpretation of shadows dancing on walls, molded by the movement of the wind and the delicate light filtering between fronds. Room finishes and furniture elements come to life, offering a visual echo of the wonders of the plant world.

FLORA PELLE

Flora Pelle, born of the desire to meld Laminam's advanced technology with a decorative element which speaks the language of delicacy and refinement, Flora takes on a new dimension, where the boundaries between the concrete and the illusory vanish. It is an invitation to rediscover the beauty of twO, a revolutionary surface which redefines the essence of design itself in a thickness of just 2 millimeters.

Technical Information

Laminam 2

Laminam 2 is the basic slab and starting point for other versions.

Processing surface: 9.4"x118.1"***

Nominal thickness: 1/16"

Use of Laminam 2

- Furniture industry and interior design application

Technical specifications Laminam 2

Laminate porcelain obtained by wet grinding of clayish raw materials, granite and metamorphic, feldspar-containing rocks and ceramic pigments. Compacted by a special shaping in compatter and sintering at 1250°C, with hybrid firing. With single gauge square edge.

Laminam 2+

Laminam 2+ is the basic slab structurally reinforced with a fibreglass mesh attached to the back with a special adhesive.

Processing surface: 9.4"x118.1"

Nominal thickness: 1/8"

Use of Laminam 2+

- interior and exterior wall covering
- Furniture industry and interior design application

Technical specifications Laminam 2+

Laminate porcelain obtained by wet grinding of clayish raw materials, granite and metamorphic, feldspar-containing rocks and ceramic pigments. Compacted by a special shaping in compatter and sintering at 1250°C, with hybrid firing. With single gauge square edge and with a structural reinforcement in inert material (fiberglass mesh bonded at the back).
